Several studies reveal the presence of UFO travelling across the different lands. Many advance countries are making the database of the UFOs (Dunken, 1971; <https://www.archives.gov>). It is critical to understand the whole process of unknown theory and facts eventhough; hypothetically, the matters are presented in several instances. It is also a well established concept among the US military and other agencies and has given their views through media in form of interviews and recorded data (Wilkins, 1954; Fuller, 1966; <https://sgp.fas.org/library/ciaufu.html>). In other developing countries, in fact, these facts are known amongst a few people but the recorded data are less available. It may be due to lack of data repositories of UFOs.

Few recordings of unidentified flying objects, brilliantly bright, above in the sky of the Sikkim are noted by the author in this writing:

One morning of summer day of 2006, one light object in the sky like a star was floating. In first instance, the question raised in mind, how come this star is visible in the day light. It was around 6:00 a.m. Curiosity raised to re-look on the object. It was bright and was in standstill position above in the sky. Meticulously, the object was observed and realized that one small another object, less bright, was also hanging few feet below. The latter was moving in a circular fashion in a slowest possible way, as if it is recording some snapshots or filing records. After the half an hour of this observation, the lower hanging small object moves upward forming an arc of 90° angle and became the two objects in same plane. Subsequently, the small object starts to move and floats in the air, and propel with aerodynamic speed towards North of the Sikkim like shootings of two bright white bullets, large and small, in the sky.

In 2021, I saw the white fumes across the sky and one frontal object was continuously releasing the white fume as if there is an issue of fire in the flying aircraft. It was flying in a zig-zig fashion. The complete scenario reflected a big "S" from one horizon to another horizon in the sky that began from the north and ended in south directions. This event remains in the sky for one and half minutes.

After 2021 onwards, the flying light objects in the sky in Sikkim was prominent, sometime in a group. Some observations of this light flying objects could not be recognized easily, as it shows the features like twinkling stars. These objects fly like a kite in either of its directions, and has back and forward movements as well as upward and downward thrusts. Some evidences were recorded in Sikkim on 25.09.2023 and 10.10.2023, respectively (Figure I and Figure 2).

Whether the Unidentified Flying Object is in Time Travel in Sikkim ?!

Figure 1: Flying Object in the East Sikkim, Gangtok (25.09.2023)

Figure 2: Flying Object in the East Sikkim, Gangtok (10.10.2023)

The inquisitive mind pokes what all these light flying objects. Whether the Unidentified Flying Object is in Time Travel in Sikkim?!
